Appointment Notes:

What is Palliative Care?

The focus of our specialty includes symptom management of underlying serious illness and development of a plan of care centered around the patient's goals and wishes. We provide physician-led services in the home or current place of residence alongside primary care, home health care and other specialists.

Goals of Palliative Care

- Assist with advance care planning and medical decision making
- Provide expert symptom management based on individual burdens
- Develop hospitalization prevention care plans and provide after-hours clinical support
- Educate and empower patients and families to manage serious illnesses
- Improve understanding of medical decision making and weigh risks against benefits of potential treatment options

How does Palliative Care work?

Once you receive a call from our intake coordinator and complete the consent packet, you will be scheduled for an in-person visit with one of our palliative clinicians.

When admitted, our program will function to provide an extra layer of support for patients and involved medical providers.

Program Overview

- Initial palliative care consultation visit completed with licensed nurse practitioner or a physician in patient's place of residence
- Routine follow-up visits in home with a palliative clinician as needed
- Option for telehealth visits based on patient needs and preference
- Access to licensed social worker or chaplain care as needed
- On-call palliative care support for urgent needs
- Comprehensive, compassionate care centered on our core values: Listen, Care and Serve

What to expect during initial visit?

- 75-minute, in person visit with a palliative clinician who can:
 - Prescribe medications; give treatment instructions and recommendations; write orders for supplementary services and assist with care coordination
- Family members and caregivers are encouraged to attend and participate
- Completion of a comprehensive consultation:
 - Review of historical events, the current state of medical conditions and primary needs
- Assist with scheduling future visit frequency and coordination of care

Who pays for Palliative Care?

Palliative care services are covered by Medicare, Medicaid, and most private insurances. If you have questions about coverage, please don't hesitate to ask. Our services coexist alongside other in-home programs, such as home health, wound care, physical therapy and occupational therapy.

If you have questions at any time, please call our office at:
